Ceres Integrated OMS-WMS Solution

At Ceres WMS, we understand the unique needs of small manufacturing businesses and the challenges they face in optimizing their operations. That's why we've integrated an Order Management System (OMS) into our Warehouse Management System (WMS) to create a single cohesive and unified platform. Our solution merges the vital features of OMS-WMS with easy-to-use production scheduling, all without the cost and complexity of an all-encompassing ERP system. Here's how Ceres can empower your manufacturing, co-packing, or machine shop business:

- ➢ **Streamlined Operations**: Ceres WMS simplifies and streamlines your warehouse operations, from inventory management to order fulfillment. With intuitive features and user-friendly interfaces, you can efficiently manage your inventory, track stock movements, and fulfill customer orders with ease.

- ➢ **Production Scheduling**: Our integrated basic production scheduling features allow you to coordinate manufacturing processes effectively with your warehouse operations. Schedule production tasks, allocate resources, and prioritize orders for efficient workflow management, all within the same system.

- ➢ **Optimized Inventory Control**: Gain real-time visibility into your inventory levels and locations, enabling you to make informed decisions about stock replenishment, allocation, and storage. Ceres WMS helps you minimize stockouts, reduce excess inventory, and improve overall inventory accuracy.

- ➢ **Quality Control Analysis Tracking**: Track and monitor quality control and testing of products to ensure compliance with regulatory and QC standards.

- ➢ **Product Expiration Management**: Manage product expiration dates effectively to minimize waste and ensure compliance with regulatory requirements. Ceres WMS provides alerts and notifications for expiring products, allowing you to take proactive measures to prevent stock spoilage.

- ➢ **Bill of Materials (BOM)**: Maintain bill of materials for your products within the WMS. Track components, raw materials, and assemblies to ensure accurate inventory management and production planning.

➢ **Product Traceability**: Ensure full traceability of products throughout the supply chain. Ceres WMS enables you to track the movement of products from receipt through production to shipment, providing visibility into product origins, batch numbers, and distribution channels.

➢ **Dashboards and Management by Exception**: Access customizable dashboards with real-time analytics to monitor warehouse performance. Utilize management by exception features to identify and address anomalies or deviations from predefined thresholds, allowing you to focus on critical areas that require attention.

➢ **Workflow Approvals**: Streamline approval processes for order processing tasks such as order approval, inventory allocation, production scheduling, shipping and returns. Ceres WMS allows you to define approval workflows and automate approval routing, ensuring that tasks are completed efficiently and accurately.

➢ **Integrated Ordering & Customer Management**: Seamlessly integrate ordering and customer management functionality into your warehouse operations. Capture and process customer orders directly within the WMS, manage customer accounts, and track order status from receipt to delivery.

➢ **Scalability**: As your business grows, Ceres WMS grows with you. Our scalable solution can adapt to your evolving needs, whether you're expanding your product line, increasing order volumes, or adding new warehouse locations. With Ceres WMS, you have the flexibility to scale your operations without limitations.

➢ **Cost-Effective Solution**: Ceres WMS offers a cost-effective alternative to full-blown ERP systems for small manufacturing enterprises. Our transparent pricing model and flexible subscription plan ensures that you have access to all features and functionality but only pay for the number of users that will access the system.

➢ **Support**: At Ceres WMS, we're committed to your success. We are available to provide you with personalized assistance, training, and guidance every step of the way. Whether you have questions about system implementation, troubleshooting issues or optimizing your warehouse processes, we're here to help.

Don't let operational inefficiencies hold your business back. With Ceres WMS, you'll have the comprehensive solution you need to drive growth, profitability, and success for your growing manufacturing business.
